## **SECTION 1 - WARNINGS**

**IMPROPER CRANE USE, CARE OR OPERATION CAN  
CAUSE INJURY, DEATH OR PROPERTY DAMAGE.**

**DO NOT OPERATE THIS MACHINE UNLESS YOU HAVE  
READ AND UNDERSTAND THE OPERATOR'S MANUAL  
AND CRANE RATED CAPACITY MANUAL.**

**COPIES OF OPERATOR'S MANUALS AND CRANE RATED CAPACITY MANUAL  
MAY BE OBTAINED FROM:**

**WRITTEN AUTHORISATION IS REQUIRED FROM TEREX LIFTING AUSTRALIA PTY LTD PRIOR TO THE USE OF ANY ATTACHMENT NOT SPECIFIED IN THE MANUAL.**

# **DEFINITIONS**

**Articulation** – The crane pivots in the middle to allow steering and slewing of the load. Working Areas for the purpose of determining Rated Capacity are less than 10° Articulation, and greater than 10° Articulation, in either direction, from straight ahead. Up to 40° Articulation is possible in either direction. See Working Area diagram

**Deration** – A decrease in the Rated Capacity due to external influences, expressed as a percentage.

**Freely Suspended Load** – Load hanging free with no direct external force applied except by the winch rope.

**Load Radius** – Horizontal distance from the centre of the front wheels forwards to the centre of the winch rope or tackle with load applied. “Radius” on Rated Capacity charts refers to the Load Radius in metres.

**Loaded Boom Angle** – This is given to assist in setting up the crane only. It gives only an approximation of the Load Radius for a specified boom length. No allowance is made for boom or tyre deflection. “Boom Angle” on Rated Capacity charts refers to the Loaded Boom Angle in degrees.

**Load Moment Indicator (LMI)** - A system which indicates, visually and audibly, to the operator when the Rated Capacity is approached and reached.

**Rated Capacity (RC)** – The total Freely Suspended Load, including the mass of material and load handling equipment, that the machine can safely lift under ideal conditions at a given boom length and Load Radius.

**Side Load** – Any external force applied either to the boom or load in a horizontal direction.

**Work Areas** – Area measured in an arc about the centre pivot as shown on the Working Area diagram. The “Articulation (green/amber)” icon on the LMI indicates which zone the crane is in. Green indicates less than 10° Articulation. Amber indicates greater than 10° Articulation.

## SPECIAL PRECAUTIONS FOR ARTICULATED CRANES

THERE IS A POTENTIAL FOR CRUSHING BETWEEN FRONT AND REAR CHASSIS WHEN THE MACHINE ARTICULATES. NEVER STAND IN THE PIVOT AREA WHEN THE ENGINE IS RUNNING OR EMERGENCY STEERING PUMP IS OPERATING. ALWAYS REMOVE THE KEY FROM THE IGNITION BEFORE WORKING IN THE PIVOT AREA.  
DO NOT LEAVE IGNITION KEY SWITCHED ON WITH ENGINE STOPPED AND PARK BRAKE OFF, AS EMERGENCY HYDRAULIC STEERING PUMP WILL ACTIVATE.

### GENERAL

1. This machine has been designed to meet the requirements of AS1418.1 & 1418.5 and has been tested in accordance with these standards for pick and carry operation on tyres.
2. Rated Capacities shown are for this machine as originally manufactured by Terex Lifting Australia Pty Ltd. The Rated Capacities only apply when all the instructions in this book are rigidly followed. Modifications to this machine or use of equipment other than that specified can result in a reduction in Rated Capacity.
3. If improperly operated or maintained, this machine can be hazardous. Operation and maintenance of this machine must be in compliance with the information documented in the operators, service and parts manuals furnished. If these manuals are missing, obtain replacements through Terex Lifting Australia Pty Ltd or their agents.
4. This machine is classified C3.

### SET-UP

1. Reduced crane Rated Capacities for the particular job shall be established, by the operator, with due allowance for adverse operating conditions. These conditions include the supporting surface, pendulum action of the load, jerking or sudden stops of the load and other factors affecting stability, two machine lifts, electrical wires, adverse weather, wind, hazardous surroundings, experience of personnel, etc.
2. Rated Capacity is based on Freely Suspended Loads with the machine on a firm, level (max. 1% slope / 0.6°) and uniform surface. Lifting, or travelling with a load, on soft or uneven ground can be hazardous and will reduce the Rated Capacity of the crane. Refer to the "OPERATION ON SIDE SLOPES" in this manual. No attempt shall be made to drag the load along the ground in any direction.
3. Wind forces on the boom, resulting from winds up to 10 m/s (36 km/h), are incorporated in the Rated Capacity. Any additional Side Loading due to wind forces on the load will reduce the Rated Capacity, and must be considered.

# DANGER

4. Rated Capacities above the red line are based on the machine's hydraulic or structural competence and not on machine stability. Rated Capacities below the red line are based on machine stability.
5. Rated Capacities include the mass of hooks, blocks, slings and auxiliary lifting devices. Their mass must be subtracted, from the listed Rated Capacity, to determine the equivalent net load.
6. Loaded Boom Angles at specified boom lengths give only an approximation of the Load Radius. The Boom Angle before loading should be greater to account for boom deflection increasing the Load Radius as the load is lifted.

## OPERATION

1. Read and understand all warnings and instructional notes.
2. Do not tip the machine to determine allowable lifting capacities.
3. Loads may be lifted from the main boom head on the winch, the rhino hook, the fixed lug, or either of the two sliding lugs on the boom. A flyjib is also available to extend the maximum boom length and a manbasket can be pinned to the head of the boom. Always use the correct Rated Capacity chart for the lifting point in use and ensure the LMI is set to the correct duty. Written authorisation from Terex Lifting Australia Pty Ltd is required prior to the use of any attachment not specified in the manual.
4. Lifting from more than one lifting point simultaneously is neither intended nor approved.
5. Handling of personnel from the boom is neither intended nor approved, except in a Terex Lifting Australia supplied manbasket, correctly installed on the head of the boom, or other approved arrangement.
6. When either the boom length or Load Radius or both are between values listed, the smallest load shown at either the next larger Load Radius or boom length shall be used, or the interpolated value shown on the LMI may be used.
7. Side Loading of the machine and load swing out may cause structural failure or machine tip-over. Side Loads may be generated by: lifting when not level; sudden acceleration or deceleration in Articulating with a load; dragging a load; pushing a load; wind forces on load and boom structure and unstable ground.
8. It is safe to attempt to telescope any load within the limits of the Rated Capacity Manual. The maximum load that may be telescoped is limited by hydraulic pressure, Loaded Boom Angle and powered boom sections lubrication.

## CAUTION

9. The winch rope is fully compensated for boom extension. The only exception is when the third extension is being used. Refer to the operator's manual for information on the use of the third extension.
10. Do not allow the winch rope to unwind fully. Always ensure a minimum of 2 wraps of rope remain on the winch drum. Note the areas on the range diagram where the fall block cannot reach the ground on 6 parts of rope.
11. Rated Capacity depends on tyre rating, tyre condition and tyre inflation pressure. All tyres must be in good condition and must be inflated to the recommended pressure before attempting a lift.
12. Pick & carry operation is permitted through the full Articulation range, however, Rated Capacity is reduced above 10° Articulation. Use the reduced capacities in the rated capacity chart if entering this Articulation zone during the operation.
13. The maximum speed for pick & carry operation is 0.4m/s (1.44km/h). The transfer case shall be set to low range.
14. Operation of this crane in excess of the Rated Capacity and disregard of the instructions is hazardous.

## OPERATION ON SIDE SLOPES

Mobile Cranes are primarily designed to be used on firm, flat, level ground (to within 1% gradient), according to AS 1418.5, any deviation from this requires that the Rated Capacity shall be reduced accordingly. As per AS 2550.5 – negotiation of slopes by mobile cranes travelling with Freely Suspended Loads should be avoided. The following precautions should be taken when operating on side slopes of up to 5° (8.75% gradient) – **REMEMBER** surface depressions and potholes will create the same effect as a side slope.

Ensure the tyres are correctly **INFLATED** as per the rated capacity manual.

Ensure the ground condition is **FIRM** enough to support the axle loads.

**REDUCE** the Rated Capacity of the crane by the percentage value for the crane as shown in figure 1 for operating on side slopes up to 5° (8.75% gradient) - **REMEMBER** the crane's load moment indicator will **NOT** automatically derate the Rated Capacity.

Use the crane's side slope inclinometer as a guide only, it is most accurate when the crane's Articulation is straight ahead without suspending a load. All Articulated chassis cranes will show some degree of side tilt, when Articulated with a load – this should not be confused with the ground's side slope.

Use the **MINIMUM** boom length and Loaded Boom Angle practical to keep the boom tip as close to the ground as possible.

Keep the load as **CLOSE** to the ground as possible.

Use the **MINIMUM** Articulation angle practical - **REMEMBER** the crane will side tilt and hence the hook will move towards the direction of Articulation whilst steering.

Keep the load on the **UPHILL** side of the crane where possible, especially when Articulated – **REMEMBER** the working Load Radius will increase if the load is suspended in the downhill position.

Load swing greatly reduces stability – **REMEMBER** to tagline loads to prevent pendulum motion of the load. Travel and crane motions should be applied gently to minimise this effect.

Sudden acceleration or deceleration of suspended load can also reduce stability – **REMEMBER** to travel gently to reduce load swing.

# SIDE SLOPE DERATION CHART

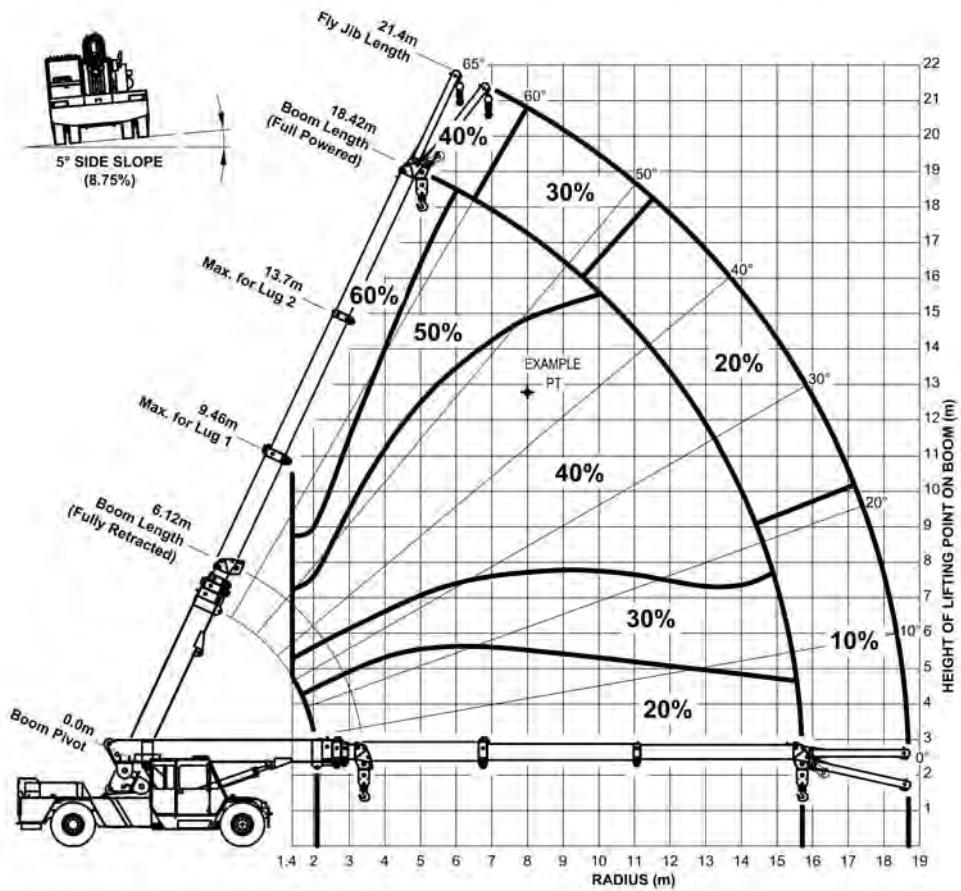

Figure 1: Percentage Deration Chart for MAC 25 at 5° Side Slope

## NOTE

1. Percentage deration chart is based on 66.6% stability as per AS 1418.5 with the crane on a firm side slope of 5° (8.75% Gradient).
2. The percentage deration is dependent upon the location of the lifting point on the boom.
3. The percentage deration should be applied to the Rated Capacity as read off the Rated Capacity chart for the applicable boom length, Loaded Boom Angle, Load Radius, Articulation Angle and Counterweight Position. See over page for an example.

Example (For MAC 25 Crane, Rated Capacity manual MXC1347B): See Percentage Deration Chart for

Lifting condition:-

Boom Length: 15.0 m

Loaded Boom Angle: 45°

Load Radius: 8.0 m

Articulation Angle: Greater than 10°

Counterweight: Fitted on rear of crane

RC (Level ground): 3700 kg (From Load Chart MXC1268A, for above lifting conditions)

Percentage Deration: 40 % (From Figure 1: Percentage Deration Chart)

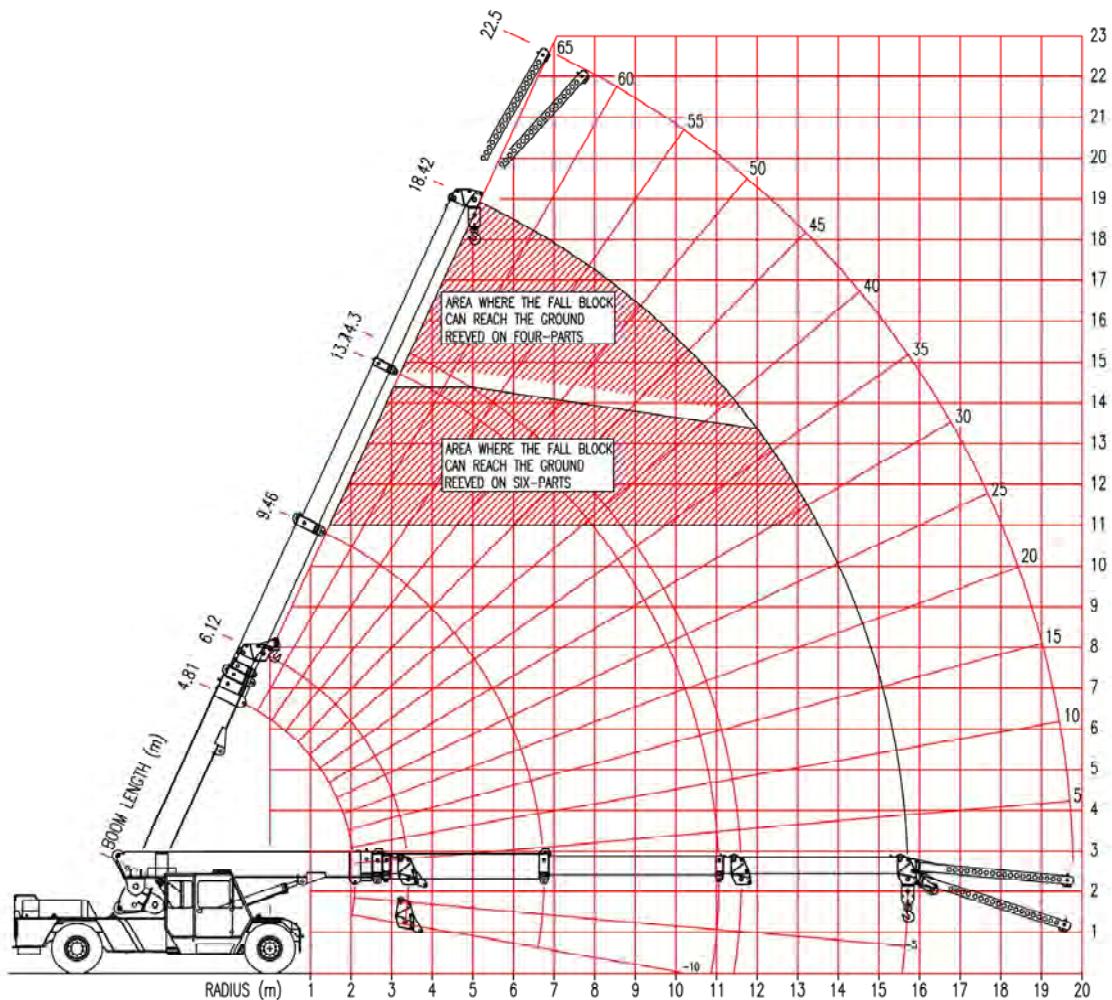

$$RC(5^\circ \text{ Slide Slope}) = RC(\text{as per Rated Capacity chart}) - \text{Percentage Deration}$$

$$\times RC(\text{as per Rated Capacity chart}) / 100 \%$$

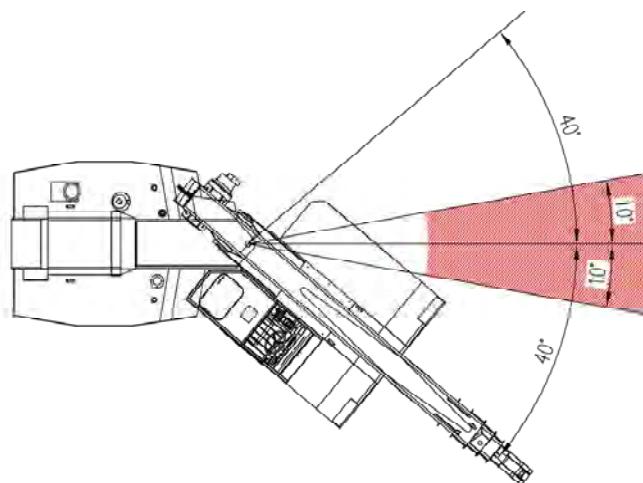

$$= 3700 \text{ kg} - 40\% \times 3700 \text{ kg} / 100\%$$

$$= 2220 \text{ kg}$$

## MAC-25 RHINO HOOK LOAD CHART - 10 DEG

COUNTERWEIGHT ON REAR OF CRANE - SPRING LOCKOUTS ENGAGED

S.W.L IN KILOGRAMS FOR SLEW ANGLES OF 10 DEGREES OR LESS EITHER SIDE OF STRAIGHT AHEAD (INDICATED BY GREEN LED ON DASH).

**BOOM ANGLE - UNDEFLECTED (REF.)**  
NOTE : VALUES IN BRACKETS () ARE ACTUAL RADIUS AT ZERO DEG. BOOM ANGLE

NOTE: VALUES IN BRACKETS () ARE ACTUAL RADIUS AT ZERO DEG. BOOM ANGLE

S.W.L. ARE BASED ON 66.7% STABILITY & STRENGTH

- S.W.L. ABOVE BOLD RED LINE ARE STRUCTURAL

S.W.L. ARE BASED ON FIRM LEVEL GROUND (1% SLOPE (0.6 DEG) AS PER AS1418.5)  
WITH TYRES INFLATED AS PER NOTES

LIFT & CARRY - THE S.W.L. SHALL BE CARRIED WITH THE MINIMUM BOOM LENGTH & AS CLOSE TO THE GROUND AS POSSIBLE AT SPEEDS NOT IN EXCESS OF 0.4 M/SEC (1.44 KM/HR).

STANDARD 1500 KG COUNTERWEIGHT (PLMXF2009) + EXTRA 2160 KG COUNTERWEIGHT (PLMXF2019-) ON REAR OF CRANE - SPRING LOCKOUTS ENGAGED

RC IN KILOGRAMS FOR SLEW ANGLES OF 10 DEGREES OR LESS EITHER

RC ABOVE BOLD RED LINE ARE STRUCTURAL

SIDE OF STRAIGHT AHEAD (INDICATED BY GREEN LED ON DASH)

RC ARE BASED ON FIRM LEVEL GROUND (1% SLOPE (0.6 DEG) AS PER AS1418.5)

#### BOOM ANGLE - UNDEFFECTED (BEE)

WITH TYRES INFLATED AS PER NOTES

NOTE : VALUES IN BRACKETS () ARE ACTUAL RADIUS AT ZERO DEG. BOOM ANGLE

LIFT & CARRY - THE RC SHALL BE CARRIED WITH THE MINIMUM BOOM LENGTH & AS

BC ARE BASED ON 66.6% STABILITY & STRENGTH

CLOSE TO THE GROUND AS POSSIBLE AT SPEEDS NOT IN EXCESS OF 0.4 m/s (1.44 km/h).
